

Mattina (October 2025) - Massimo Ferragamo

Mattina is a 144-second noise study shaped by Fibonacci proportions—a love letter to the night.

I would like to pay homage to Giuseppe Ungaretti, whose poetry inspired this piece. It is my life's goal to reach his level of artistry.

The sounds you hear are drawn from two noise sources: a feedback FM patch on the Buchla 200e and computer-generated white noise. Both are sculpted through spectral processing and filtering using Composer's Desktop Project. Fibonacci sequences guided not only the structure of the composition but the shaping of its sonic materials; the values in the spectral processing are Fibonacci numbers, embedding a hidden symmetry beneath the apparent chaos.

The piece came together after a long sleepless night. As I drifted toward sleep, slipping into the liminal space between wakefulness and dreams the composition began to take form. *Mattina* pays homage to the quiet act of watching a night unfold—listening to every subtle sound until the world around you begins to wake, and the sky slowly shifts from a deep, starry blue to a bright, glowing red.
